VELOCITY LABS

CODE AUDITS

Know what you have before you build on it.

An independent code review of your application by senior developers who have been building and maintaining web applications since 2007. You get a clear grade, the risks that matter, and a prioritized plan, written so owners and developers can both act on it.

Essentials

A fast health check

$1,000 fixed fee

Best for: Answering "is this codebase OK?" before you buy, hire, or launch.

- Review of your code, configuration, CI, and database schema
- Automated scans for security issues, vulnerable and outdated dependencies, leaked secrets, and code quality
- The essential checks for each technology in your stack
- Critical and high findings written up in full

Standard

A thorough review

$1,500 fixed fee

Best for: An inherited codebase, a pre-launch review, or before hiring a team.

Everything in Essentials, plus:

- Every check for each technology, not just the essentials
- Your app and tests running in our isolated environment
- How your team ships, when the code comes with its git history
- Every finding written up in full

Comprehensive

Due diligence depth

$2,500 fixed fee

Best for: Acquisitions and technical due diligence, compliance preparation, or after an incident.

Everything in Standard, plus:

- Line-by-line review of sign-in, payments, and data access
- Steps to reproduce every finding
- Your public website: accessibility, search visibility, and security headers
- Domain and email setup: DNS, SPF, DKIM, and DMARC

EVERY AUDIT INCLUDES

Graded on eight areas

Security, data, performance, architecture, code quality, testing, dependencies, and operations.

A report for owners and developers

A plain-language summary up front, specific findings with fixes behind it.

Prioritized next steps

What to fix first, with effort estimates.

Your code stays contained

Reviewed in an isolated, disposable environment, never copied anywhere else and deleted immediately after.

Hands off your systems

We never connect to your production servers, databases, or accounts.

Help with the fixes

We can do the work, alongside your team or on our own. Start hourly development with us within 30 days of the report and up to $1,000 of the audit fee comes off your first invoice.

Not sure which level fits?

Tell us about your app and we'll recommend one.
